

Examples of Effective Objectives

Upon completion of this activity, the participant will demonstrate the ability to:

- Identify shoulder anatomy on a diagram.
- Recognize four common causes of shoulder pain.
- Compare and contrast several management strategies to patients with chronic shoulder pain.

Upon completion of this activity, the participant will demonstrate the ability to:

- Describe the current clinical practice for the treatment of primary and metastatic brain and spinal cord tumors in adults and children.
- Evaluate the process of translating laboratory research into clinical trials for patients with malignant gliomas.
- Outline current advances in molecular biology, immune therapy, stem cell therapeutics and drug delivery systems for brain tumors.
- Identify challenges caregivers face in caring for patients with brain tumors.
- Recognize quality of life issues for patients with brain tumors and the effectiveness of measurement tools.

Upon completion of this activity, the participant will demonstrate the ability to:

- Compare and contrast several management strategies for patients with chronic shoulder pain.
- Describe the current clinical practice for the treatment of metastatic brain tumors in adults.
- Evaluate the process of translating laboratory research into clinical trials for patients with malignant gliomas.
- Outline current advances in molecular biology, immune therapy, stem cell therapeutics, and drug delivery systems for brain tumors.
- Identify challenges caregivers face in caring for patients with brain tumors.
- Recognize quality of life issues for patients with brain tumors and the effectiveness of measurement tools.

Please note: Goals are broad statements of the aims of an activity; objectives are precise, measurable results that the learner is expected to accomplish.
